

Obleu

for Professional

"Obleu for Professional" beauty care showerhead for hair salons takes advantage of the washing power of microbubbles as it improves the quality of shampoo work.

Obleu for Professional is specifically designed for hair salon use, making actual microbubble operation possible simply by switching showerheads.

Approximately 48 million microbubbles per liter is used for the scalp and pores, cleaning dirt and making it possible for treatments such as hair waxing. After the hair has dried, it stands up well and becomes flexible.

Shampoo, treatment, head spa and other shampoo operations are leveled up to satisfy your customers.

See the dirt that you've washed off

When you use Obleu for Professional, just let the water collect in the shampoo bowl. You will see the dirt and grime wash off with the hair wax and sebum, rising to the surface as you lightly rinse the hair without using any shampoo.

Lightly rinse along the hairline as you wash.

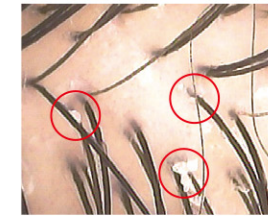

In just minutes, you will see sebum, hair wax and other impurities rise to the surface.

The high washing power of Obleu for Professional under the microscope

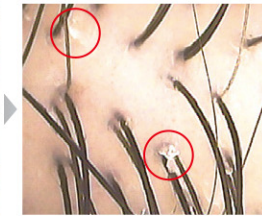

We compared the scalp washing results of Obleu for Professional and a standard shower. With a standard shower, sebum remained after 60 seconds of washing. The Obleu for Professional totally cleaned the scalp in 30 seconds.

Standard Shower Before

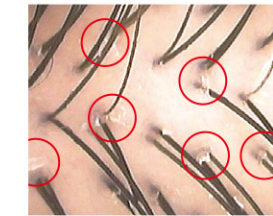

Sebum soil hardened around the pores.

After

Sebum grime remains after 60 seconds of washing.

Obleu for Professional Before

Sebum soil hardened around the pores.

After

Sebum grime totally cleaned after 30 seconds of washing—half the time of a standard shower.

Approximately 48 million microbubbles per liter

Obleu for Professional generates a large volume of microbubbles at a particle size that is ideal for washing in a hair salon. Both the quality and volume make it possible for outstanding wash results.

Obleu for Professional holds down scalp smell

A comparison was made between Obleu for Professional and a standard shower in which the hair was washed for one minute with unscented shampoo and rinsed off for two minutes. After the same operation, Obleu for Professional was found to hold down scalp smell, significantly improving the effects of a shampoo.

Regarding the Fine Bubble Industries Association

Fine Bubble Industries Association is engaged in the international standardization of microbubble technology. The association is an overall platform for the certification and development of microbubble uses among businesses and academics, and works with the government to establish an overall business and healthy market for the microbubble industry. Working together with businesses and universities to establish international standards for microbubbles, the association is committed to further accelerating the development of the microbubble business.

Microbubbles are used in various industries

In dentistry, they are used for cleaning teeth.

Used for cleaning lakes and rivers to improve the environment.

Used for cleaning pets.
